

Use

HiPP 3 JUNIOR Combiotic® is ideal for children from 1 year on and can be served for breakfast, with cereals, for dinner or simply in-between meals. HiPP 3 JUNIOR Combiotic® can be fed following any other follow-on formula.

Preparation

Please follow the instructions carefully when preparing the formula. Incorrect preparation or storing the prepared formula for a longer period of time can be harmful to your baby's health, e. g. due to the growth of undesirable bacteria. Therefore, prepare the formula freshly before every meal, feed immediately and dispose of any leftovers. Close the opened sachet tightly after each use, store in a dry place at room temperature and use up within 3 weeks.

HiPP 3 JUNIOR Combiotic® can be prepared with hot or cold water.

Please do not warm up formula in the microwave (risk of scalding!).

1 Boil fresh drinking water and allow it to cool down to approx. 40-50 °C\*.

2 Pour the required amount of water (hot or cold\*\*) into a (sippy) cup.

3 Add the required amount of powder by loosely filling the measuring scoop and wiping off any excess powder.

4 Stir and, if necessary, check if it has reached drinking temperature (approx. 37 °C).

\*In order not to harm the natural lactic acid cultures (lactobacilli), please do not prepare the formula with water that is too hot.

\*\*If you want to prepare cold HiPP 3 JUNIOR Combiotic® please use boiled water that has cooled down.

New Feeding Guide

We recommend 2 servings of HiPP 3 JUNIOR Combiotic® per day. The recommended drinking amounts and the number of servings per day are guidelines and may vary from child to child. Your child doesn't necessarily have to finish the whole cup.

Please only use the enclosed measuring scoop!

Ready-to-drink product, ml	Boiled water, ml	Number of measuring scoops	Portions per day
150	135	3	2

Important information

HiPP 3 JUNIOR Combiotic® is intended for children from 1 year and should be served in a cup. Please ensure a well-balanced diet and a healthy lifestyle for your child and make sure to brush their theeth regularly after they get their first tooth – especially before bedtime.

Why we pack our formula in cardboard folding boxes:

less carbon emissions than with metal cans

cardboard & foil sachet can be disposed of separately

Vegetable oil-based printing inks – mineral oil-free!

Responsibly sourced cardboard

nutrition experts  
for children

3 Growing-up Milk from 1 year

according to the latest recommendations

Young children need more of certain nutrients

Even after their first birthday, children still have specific nutritional needs as they are going through a period of intense growth. In order for your child to develop as they should, some nutrients such as calcium and vitamin D are particularly important. HiPP 3 JUNIOR Combiotic® reflects the fact that a toddler needs 3 times more calcium and 7 times more vitamin D than an adult.<sup>1</sup> HiPP 3 JUNIOR Combiotic® was developed in such a way that your child can receive the nutritional building blocks they need:

- ✓ **PROBIOTIK®**  
Natural lactic acid cultures
- ✓ reduced protein content<sup>2</sup>
- ✓ **iodine:** contributes to normal cognitive development
- ✓ **vitamin C:** contributes to the normal function of the immune system.\*
- ✓ **vitamin D:** contributes to normal development of bones and teeth.\*\*
- ✓ **calcium:** contributes to normal development of bones.\*\*\*

<sup>1</sup> Higher nutrient needs of toddlers vs. adults per kg of body weight (EFSA 2013, men 80 kg, toddlers 12 kg)

<sup>2</sup> HiPP 3 JUNIOR Combiotic® = 1.0 g/100 ml, cow's milk = 3.3 g/100 ml

Comparison of HiPP 3 JUNIOR Combiotic® to regular cow's milk (3.5 % fat)

Studies show that cow's milk cannot sufficiently meet the nutritional needs of children. Nutritional values per 300 ml (= 2 portions per day)

If you have any questions concerning your baby's diet
