

60 years of experience in formula production

For growing toddlers and healthy bone formation!

Even after their first birthday, children still have specific nutritional needs as they are going through a period of intense growth. On average, a child will have nearly doubled their birth height by the age of 3.

Provide them with all the right nutrients they need for their development: **Did you know that toddlers need 7 times more vitamin D per kg of body weight¹** than adults? The sunshine vitamin is important **for healthy bone formation!**

¹EFSA 2013; men 80 kg, toddlers 12 kg

A child-friendly recipe – based on the latest recommendations

Whether for breakfast with cereals or in the evening before brushing their teeth, HiPP COMBIOTIC® Growing-up Milk with natural lactic acid cultures is gentle on your toddler's tummy. It provides them with all the essential vitamins and minerals:

- ✔ ***Vitamin C:** important for the immune system
- ✔ ****Vitamin D:** contributes to the normal development of bones and teeth
- ✔ *****Calcium:** contributes to normal bone development
- ✔ with linoleic acid, docosahexaenoic acid and galacto-oligosaccharides

Of course, sufficient outdoor exercise is also crucial for age-appropriate and healthy development.

Science and nature hand in hand

HiPP supreme quality – We are committed to using only strictly controlled ingredients, which have to meet our stringent HiPP quality requirements.

Important information

HiPP 3 JUNIOR Combiotic® is intended for children from 1 year and should be served in a cup. Please ensure a balanced, varied diet and a healthy lifestyle for your child and make sure to brush their teeth regularly after they get their first tooth – especially before bedtime.

Why we pack our formula in cardboard folding boxes:

less carbon emissions than with metal cans

cardboard & foil sachet can be disposed of separately

Vegetable oil-based printing inks – mineral oil-free!

Supporting responsible forestry

Beverage based on milk for the nutrition of young children

with natural lactic acid cultures

3 from 1 year
GROWING-UP MILK
Recipe according to the latest recommendations
For strong bones – with lots of vitamin D** and calcium***

Use
HiPP 3 JUNIOR Combiotic® is ideal for children from 1 year on and can be served for breakfast, with cereals or for dinner. HiPP 3 JUNIOR Combiotic® can be fed following any other follow-on formula.

Preparation Guide
Please follow the instructions carefully when preparing the formula. Incorrect preparation or storing the prepared formula for a longer period of time can be harmful to your baby's health, e.g. due to the growth of undesirable bacteria. Therefore, prepare the formula freshly before every meal, feed immediately and dispose of any leftovers. Close the opened sachet tightly after each use, store in a dry place at room temperature and use up within 3 weeks. Please do not warm up formula in the microwave (risk of scalding!).
HiPP 3 JUNIOR Combiotic® can be prepared with hot or cold water.

- 1 Boil fresh drinking water and allow it to cool down to approx. 40-50 °C*.
- 2 Pour the required amount of water (hot or cold**) into a (sippy) cup.
- 3 Add the required amount of powder by loosely filling the measuring scoop and wiping off any excess powder.
- 4 Stir and, if necessary, check if it has reached drinking temperature (approx. 37 °C).

*In order not to harm the natural lactic acid cultures (lactobacilli), please do not prepare the formula with water that is too hot.
**If you want to prepare cold HiPP 3 JUNIOR Combiotic® please use boiled water that has cooled down.

Feeding Guide
We recommend 2 servings of HiPP 3 JUNIOR Combiotic® per day. The recommended drinking amounts and the number of servings per day are guidelines and may vary from child to child. Your child doesn't necessarily have to finish the whole cup.
Please only use the enclosed measuring scoop!

Ready-to-drink product	Boiled water	Number of measuring scoops	Portions per day
