

50 years of experience in formula production

HiPP ORGANIC COMBIOTIC® – a unique formula that is inspired by nature

HiPP 1 ORGANIC COMBIOTIC® contains:

Natural lactic acid cultures (L. fermentum), originally obtained from breast milk. Breast milk contains a large number of natural lactic acid cultures that can vary from mother to mother.

***DHA:** a legal requirement for infant formula. DHA belongs to the group of omega-3 fatty acids.

HiPP 1 ORGANIC COMBIOTIC® is tailored to meet the special nutritional needs of infants and their sensitive tummies.

HiPP 1 ORGANIC COMBIOTIC® contains only lactose and, like breast milk, can be fed on demand, as often and as much as your baby wants.

When switching to our HiPP 1 ORGANIC COMBIOTIC® the consistency of your baby's stool may change. This is a normal occurrence for this product, as the galacto-oligosaccharides (GOS) in our HiPP 1 ORGANIC COMBIOTIC® may lead to softer stools.

Science and nature hand in hand

In harmony with nature – 30 years of tummy-friendly ingredients in special HiPP organic quality.

Climate-neutral

From one of HiPP's carbon-neutral production facilities, thanks to the support of global climate protection projects.

ORGANIC

The HiPP Organic Seal guarantees highest quality and exceeds the EU requirements for organic quality.

Important information

...on your baby's nutrition

Breastfeeding is best for your baby. Please consult your hospital or paediatrician if you want to give your baby infant formula.

...on your baby's dental health

Like breast milk, formulae also contain carbohydrates. They are an important part of your baby's nutrition. Frequent or prolonged contact between your baby's teeth and liquids containing carbohydrates may lead to severe tooth decay and related adverse health effects. Do not give your child a bottle to suck on constantly and encourage your child to drink from a cup as early as possible.

Why we pack our formula in cardboard folding boxes:

less carbon emissions than with metal cans

cardboard & foil sachet can be disposed of separately

Vegetable oil-based printing inks – mineral oil-free!

Responsibly sourced cardboard

AL2104

L. fermentum hereditum® and GOS are CLINICALLY PROVEN*

contains DHA*
META-FOLIN[®]
lactose only

1 from birth onwards
ORGANIC INFANT MILK
*as required by the legislation for all infant formula
ideal to complement breastfeeding

³ Metafolin® is a registered Trademark of Merck KGaA, Darmstadt, Germany

This product left our factory in perfect condition – please make sure the packaging is undamaged before consumption.

Freshness Guarantee

The foil sachet ensures optimal freshness and aroma protection. Store in a dry place at room temperature and avoid temperature fluctuations. Foil sachet and cardboard box must be recycled separately.

Use

- for exclusive feeding from birth onwards or to complement breastfeeding
- following breastfeeding or any other infant formula
- like breast milk, this formula can be fed on demand, as often and as much as your baby wants.

Preparation Guide

Please follow the instructions carefully when preparing the formula. Incorrect preparation or storing the prepared bottle for a longer period of time can be harmful to your baby's health, e. g. due to the growth of undesirable bacteria. Therefore, prepare the formula freshly before every meal, feed immediately and dispose of any leftovers. Clean the bottle, teat and ring thoroughly. Close the opened sachet tightly after each use, store in a dry place at room temperature and use up within 3 weeks. Please do not warm up formula in the microwave (risk of scalding!).

5

- 1 Boil fresh drinking water and allow it to cool down to approx. 40-50 °C*.
- 2 Pour the required amount of the boiled water (see feeding guide) into the feeding bottle.
- 3 Add the required amount of powder (see feeding guide) to the water by loosely filling the measuring scoop and wiping off any excess powder.
- 4 Close the bottle and shake vigorously.
- 5 Allow it to cool down to drinking temperature (approx. 37 °C) – check temperature.

*in order not to harm the natural lactic acid cultures (lactobacilli), please do not prepare the formula with water that is too hot.

Feeding Guide

The recommended drinking amounts and the number of bottles per day are guidelines and may vary from baby to baby. Your baby doesn't necessarily have to finish the bottle.

Please only use the enclosed measuring scoop!

Age	Bottle feeds per day	Ready-to-drink product, ml	Boiled water, ml	Number of measuring scoops
1 st to 2 nd week*	7-8	70	60	2
3 rd to 4 th week	5-7	100	90	3
5 th to 8 th week	5-6	135	120	4
3 rd to 4 th month	5	170	150	5
from the 5 th month**	4-5	200	180	6
from the 6 th month	4	235	210	7

* Unless otherwise recommended by a doctor.

** From the 5th month onwards and after having consulted your paediatrician, you can introduce baby food jars and cereals.

Each newly introduced complementary meal (jars/cereals) replaces one bottle feed.
