

50 years of experience in formula production

HiPP AR Special Formula – in cases of frequent burping and spitting up

It is completely normal for babies to spit up small amounts of milk or formula when burping after a meal. Some babies, however, spit up considerably more feed than usual or vomit forcefully. HiPP AR Special Formula helps against frequent burping and spitting up. By adding the natural thickening agent, locust bean gum, HiPP AR Special Formula has a thicker consistency helping the feed to stay down. This way, less food flows back into the food pipe (reflux) and your baby burps and spits up less.

HiPP AR Special Formula also contains:

- all the important nutrients
- natural lactic acid cultures (L. fermentum) that were originally derived from breast milk. Breast milk contains a large number of natural lactic acid cultures that can vary from mother to mother

Locust bean gum is a valuable natural dietary fibre. Therefore, switching to HiPP AR Special Formula may cause softer stools in the beginning.

Science and nature hand in hand

Climate-neutral

From one of HiPP's carbon-neutral production facilities, thanks to the support of global climate protection projects.

We are committed to using only strictly controlled ingredients – also in our HiPP AR Special Formula, which have to meet our stringent HiPP quality requirements, which are far more stringent than required by law.

Preparation Guide

Please follow the instructions carefully when preparing the formula. Incorrect preparation or storing the prepared bottle for a longer period of time can be harmful to your baby's health, e. g. due to the growth of undesirable bacteria. Therefore, prepare the formula freshly before every meal, feed immediately and dispose of any leftovers. Clean the bottle, teat and ring thoroughly. Close the opened sachet tightly after each use, store in a dry place at room temperature and use up within 3 weeks. Please do not warm up formula in the microwave (risk of scalding!).

- Boil fresh drinking water and allow it to cool down to approx. 40-50 °C*.
- Pour the required amount of the boiled water (see feeding guide) into the feeding bottle.
- Add the required amount of powder (see feeding guide) to the water by loosely filling the measuring scoop and wiping off any excess powder.
- Close the bottle and shake vigorously.
- After preparing HiPP AR Special Formula, leave to stand for 7 minutes to thicken. Then shake again briefly and check whether it has cooled down to drinking temperature (approx. 37 °C).

*In order not to harm the natural lactic acid cultures (lactobacilli), please do not prepare the formula with water that is too hot.

Feeding Guide

The recommended drinking amounts and the number of bottles per day are guidelines and may vary from baby to baby. Your baby doesn't necessarily have to finish the bottle.

Please only use the enclosed measuring scoop!

Age	Bottle feeds per day	Ready-to-drink product, ml	Boiled water, ml	Number of measuring scoops	
1 st to 2 nd week*	7-8	70	60	2	*Unless otherwise recommended by a doctor.
3 rd to 4 th week	5-7	100	90	3	
5 th to 8 th week	5-6	135	120	4	**From the 5 th month onwards and after having consulted your paediatrician, you can introduce baby food jars and cereals.
3 rd to 4 th month	5	170	150	5	
from the 5 th month**	4-5	200	180	6	
from the 6 th month	4	235	210	7	

Each newly introduced complementary meal (jars/cereals) replaces one bottle feed.

AR

from birth onwards SPECIAL FORMULA

tailored to baby's special nutritional needs

Use

HiPP AR Special Formula is suitable for the dietary management of frequent burping and spitting up in infants and may be used from birth onwards for the exclusive feeding of your baby.

Important information

- Breastfeeding is best for your baby. Please consult your hospital or paediatrician if you want to give your baby special formula.
- Special formulae should only be used under medical supervision and only as long as deemed necessary to alleviate symptoms.
- HiPP AR Special Formula is suitable for the dietary management of frequent burping and spitting up in infants and may, under medical supervision, be used from birth onwards for the exclusive feeding of your baby, and from 6 months as part of a mixed diet.
- HiPP AR Special Formula is not suitable for infants who are at risk of developing allergies. Please consult your paediatrician.
- Do not use HiPP AR Special Formula in cases of a known or suspected cow's milk protein allergy.
- HiPP AR Special Formula should make your baby feel better after a few days. Should no improvement of the symptoms be noticeable, please contact your paediatrician again.
- Like breast milk, formulae also contain carbohydrates. They are an important part of your baby's nutrition. Frequent or prolonged contact between your baby's teeth and liquids containing carbohydrates may lead to tooth decay and related adverse health effects. Do not give your child a bottle to suck on constantly and encourage your child to drink from a cup as early as possible.
- Not suitable for parenteral use.
